Expression Desktop

Zero-Administration Network-Centric Desktop Workstation

- 
- > Zero-Setup
 - > Zero-Maintenance
 - > Automatic Desktop, Firewall & Network Configuration
 - > Very Low TCO
 - > Linux® & Windows® Side-by-Side
 - > Roaming User Support
 - > Instant Workstation Replacement & Upgrades
 - > File & Application Protection from Accidental Deletion
 - > Virus Protection

- > Web Browsing
- > Email
- > Spreadsheets
- > Processing
- > Presentations

Expression Desktop is the perfect solution for businesses and organizations seeking network-oriented desktop systems. Cost-effective, easily managed and reliable, it provides an integrated combination of powerful infrastructure server and suite of office software.

Expression Desktop works exclusively with the cutting-edge Nitix™ server operating system to provide basic business applications (such as web browsing, email, spreadsheets, word processing and presentations) as well as sharing of user accounts, files, applications, and email across a network automatically and transparently.

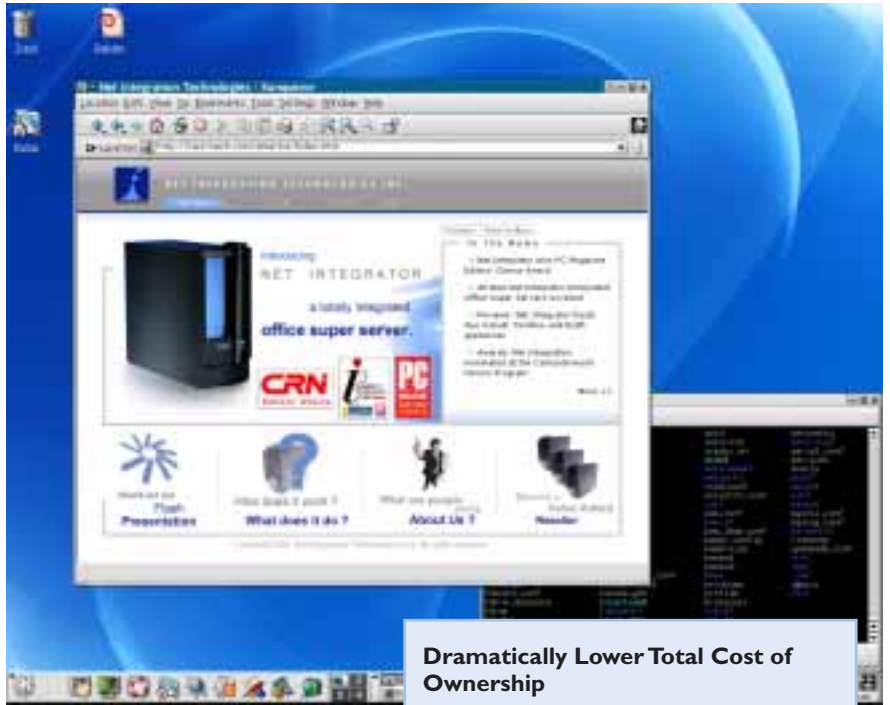

Expression Desktop extends the technical innovations of Nitix and the Nitix-powered Net Integrator product family into the office end-user's desktop to provide a zero-administration, Linux-based and PC hardware-based, network-focused solution.

Enhancing The Thin Client Concept

Expression Desktop is much more than a "thin client". It is a complete desktop system optimized to run on the cutting-edge networks made possible with Nitix.

The traditional thin client model involves a "simple workstation/powerful-and-complicated server" set-up. Expression Desktop transforms that into "simple workstation/simple server", where the complexities and costs are trivial by comparison, while retaining (and greatly improving on) the advantages of the thin client concept.

Expression Desktop sets a new standard for TCO reduction, price performance and reliability. It's ideal for classroom environments, and perfect for everything from basic/back office or call center operations to multi-user, remote office networking, enhanced-terminal or kiosk installations, and other network-oriented applications.

Dramatically Lower Total Cost of Ownership

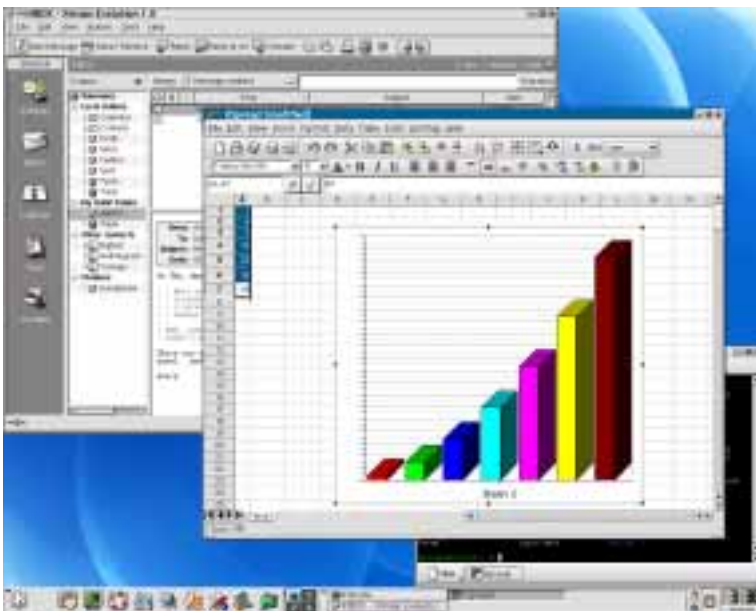

- > Simplified administration configures network settings, firewall, email accounts and other user settings in five minutes or less
- > Easily replaceable and upgradeable desktop stations

Superior Price Performance

- > A network-oriented desktop PC system (including GHz-level processor, full business application software and top quality monitor) for the cost of a thin client workstation

Increased Reliability & Simplicity

- > Leverage the unique technologies of Nitix, including *NetIntelligence*, *SystemER*, *TunnelVision*, *DoubleVision* and *idb*

Expression Desktop is the newest solution from Net Integration Technologies Inc., developers of the innovative and acclaimed* Nitix server operating system and Nitix-powered Net Integrator family of products.
